Description

Red Bull Spect ski goggles. Branded ski goggles have a modern design that will please both ladies and gentlemen. Their advantage is a light frame made of polyurethane TPU, which is resistant to abrasion and rapid wear. Cylindrical mirror lenses have flatter optics, but still provide excellent peripheral vision. Boost lenses provide clear vision and vibrant colors. Red Bull glasses use F°SCAPE Anti-Fog treatment. The FREE°D technology, in turn, corrects the refraction of light, thus preventing optical distortion.

Stylish snowboard and ski goggles are comfortable to wear thanks to the triple face foam. The adjustable strap has the brand's logo and you can customize it individually to your liking. Thanks to the internal silicone band of Red Bull, the glasses are kept in place. They also provide 100% protection against UVA and UVB sunlight.

The BONNIE model has everything you would expect from ski goggles. Modern style, excellent optical properties and high wearing comfort.
