Description

Redmi headphones. Wireless headphones are a pleasant companion on the way to work, during free time or playing sports. Redmi Buds 3 Pro are compact and light and will provide you with perfect sound quality. They use the technology of dual active noise suppression, so that absolutely nothing disturbs you while listening. Thanks to artificial intelligence, they can recognize the type of surrounding noises and, based on this, adjust the sound exactly according to the given situation - in a different way, they suppress the ambient noise in the subway, in a different way in a cafe, and in a different way in a library or office. The headphones have a built-in microphone, so they are also suitable for hands-free calling.

Bluetooth headphones have a 9 mm composite vibrating membrane coil, which is a guarantee of beautiful, clear sound. A high-quality battery has low energy consumption and a long life, up to 6 hours per charge. The package includes a charging case, which extends the duration of the headphones up to 28 hours. Fast and wireless charging functions are also supported.

Redmi headphones allow you to connect two devices at the same time using Bluetooth. Android, iOS and Windows platforms are supported, and you can easily switch between them. The headphones with microphone have IPX4 protection. Charging takes place via USB-C.
