### Description

Redmi headphones. Wireless headphones in white design are stylish and trendy. They offer you complete freedom of movement and allow you to immerse yourself in your favorite melody or game in excellent sound quality. You can easily connect them to your mobile device or laptop using Bluetooth 5.3. The wireless transmission of sounds takes place without delay, there is no distortion of the sound or reduction of the listening experience. You can also use the headphones while playing mobile games. Then you will definitely appreciate the low latency mode, which ensures lightning-fast reactions and perfect synchronization of image and sound. After the first pairing, the headphones will connect to the device automatically.

The earphones have a battery that provides up to 5 hours of operation. In combination with the charging case, the Redmi headphones last up to 20 hours. Bluetooth headphones are durable thanks to IP54 protection. An integrated microphone is also an advantage, thanks to which you can receive calls and make hands-free calls. Then you will also appreciate the noise suppression function. Their ergonomic shape fits exactly in the ears. Wireless headphones are also resistant to dust, drops of water or sweat. They are therefore also suitable for sports.

Redmi headphones have 12 mm large dynamic speakers that guarantee clear sound and every detail. They are operated intuitively by touch and click. A double click is used to start or pause music and answer a call. Triple tap to skip to the next song and end the call. A simultaneous long press on the touchpad of both earphones activates or deactivates the low latency mode. Their light weight is also an advantage, so you hardly feel them in your ears. They are a suitable companion for work, on the bus or while running or cycling.
