Description

Tecnica women's shoes. Thanks to the anatomical cut, low hiking boots will provide you with extra comfort. They are a guarantee of high comfort and stability. These women's outdoor shoes ensure precision when climbing and grip in technical terrain. It has a durable synthetic upper, which is also light. The classic lacing is extended to the toe. The tip of the mountain boots is rubberized for better protection. An important part is the Gore-Tex® membrane, thanks to which you will stay dry and comfortable in all conditions.

Women's trekking shoes have a midsole with different densities. The result is greater cushioning and a smoother heel-to-toe transition when walking and torsional stiffness when climbing. It is the result of TPU Edge Frame technology. It is embedded in the core of the shoe and provides support and flexibility exactly where you need it. Another advantage of women's hiking boots is the Vibram® Megagrip™ mixed sole. Thanks to its multi-directional lug pattern, it easily adapts to different terrains and changing conditions. It also has a flat climbing zone at the top. The rubber arch improves edging power and climbing accuracy on ledges and edges. Tecnica Sulfur footwear is suitable for longer distances in rugged mountain terrain.

Product details:

- low hiking boots
- anatomical cut

- durable and breathable upper
- lacing extended to the toe
- rubber tip
- midsole with different density for better cushioning
