Description

Salewa women's shoes. Alp Mate Winter Mid hiking boots are developed for trekking expeditions in the colder season. The trekking boots have an upper made of thick suede and robust fabric with a waterproof, breathable membrane that protects against snow and rain. An extensive rubber belt around the perimeter ensures additional 360° protection.

Women's forest boots are designed with an emphasis on support and performance during hiking. Women's trekking shoes feature SALEWA® 3F System protective technology with robust Kevlar fibers for flexibility, heel support and stability. The warm alpine wool lining offers improved thermal insulation, especially in colder conditions. The EVA midsole provides excellent cushioning and shock absorption on harder surfaces.

The Pomoca™ Winter Hike sole has a pattern that provides stability, grip and traction on rock, mud and especially snow and ice, while its biomechanical S-Path technology supports natural movement on and off the hiking trail. Salewa women's mountain boots feature a PFC-free water repellent (DWR) finish that is manufactured to strict, independently audited social responsibility standards.
