Description

Asics women's shoes. Running sneakers for ladies have a modern design and stand out with functional features. The breathable technical mesh upper is durable and adapts to the foot. You can adjust the classic lacing individually and the loop on the back will help you when putting on or taking off shoes. Black sneakers with pink details will live up any running outfit.

Asics running shoes use APLMIFOAM PLUS technology in the midsole, which helps improve durability and creates a softer, more comfortable feel on impact. Thanks to Rearfoot GEL technology, women's running shoes improve shock absorption. The internal Ortholite insert also contributes to wearing comfort. GUIDANCE LINE technology provides a more consistent step. Asics women's sneakers have a rubber sole that provides the necessary traction thanks to the protrusions.
