### Description

Kayland women's shoes. Versatile shoes for more demanding hiking are suitable footwear even on routes where you take a heavy hiking backpack. Women's hiking boots are a fusion of the traditional look of hiking boots and modern shoes. They are easily combined with other tourist clothes. The upper part of the trekking shoes is made of durable suede. It is combined with a modern higher collar with technical fabric inserts and polyurethane applications that strengthen the entire structure without weighing it down.

The women's hiking boots are lightweight thanks to the dual-density EVA midsole. They are of light and flexible construction. High hiking boots have laces with metal hooks. The Vibram Multiverse Hike sole has higher and variously placed protrusions that ensure better dirt removal and adhesion to the terrain. The toe and heel are wide for excellent, perfect adhesion to the terrain when walking uphill or downhill. It goes without saying that the Gore-Tex membrane ensures waterproofness and a feeling of dryness in all weather conditions.
