Description

Northfinder brand jacket. The Northcover outdoor jacket is a packable (emergency) all-weather jacket. The advantage of the multifunctional windbreaker is a light water-resistant material that provides excellent protection in adverse weather. A functional windbreaker is essential equipment for a backpack throughout the year. A long trek, cross-country skiing, cycling, hiking or traveling around the world, you must not miss this universal piece.

The multifunctional jacket can be packed into a small bag with a volume of less than half a liter and protects against cold, wind, rain or snow. Everything is taken care of by a two-layer polyamide membrane with taped seams, which surprises with its excellent water resistance of up to 5000 mm.

The tourist windbreaker has a classic cut with an elastic hood, which is a guarantee of movement comfort. Elastic cuffs with thumb fixation against bunching together with an adjustable waistband and a YKK full-zip with internal gusset secure the jacket against the wind. Openings in the armpits serve for ventilation. To increase ventilation, the trek jacket can be partially unzipped and connected to the chest with a belt to reduce unpleasant flapping. So that you can always have the necessary things with you, we have equipped it with side pockets and specially divided internal pockets for a mobile phone, keys or payment card. Whatever and wherever you do, this trekking jacket is ready with a weight of only 190 g (size M) to keep you dry and keep the wind out.
