Description

Trezeta women's shoes. Trekking shoes Annette adapt perfectly to the anatomy of the female foot. Hiking boots will appeal to ladies who prefer a timeless design combined with functionality. The upper of the forest boot for women is a combination of suede and textile for a higher level of breathability. The tip of the trekking shoes is massively reinforced with additional material for a higher degree of toe protection.

Trekking shoes have a shaped insole that provides comfort even during a longer hike. The EVA midsole guarantees high shock absorption. The microporous midsole has two layers with different densities: the upper layer, which is denser, has the function of stabilizing the shoe, while the lower layer, which is less dense but stronger, plays a fundamental role in absorbing shocks in the terrain. The advantage of mountain boots is the Trezeta Water Stopper membrane, which ensures waterproofness. Gray mountain boots are great companions when tackling difficult hiking trails.

Product details:

- waterproof membrane Trezeta Water Stopper Membrane
- EVA shaped insole + fabric
- molded polypropylene insole
- microporous midsole
- massively reinforced tip

- weight: 410 g 1/2 pair
