Description

Kayland footwear. Low hiking shoes designed for easy climbing such as via ferrata, paved hiking trails and mixed routes. Mountain shoes have a sophisticated combination of materials, are powerful, comfortable and practical. Boots for the forest with an asymmetric lacing system ensure a firm fixation of the foot. Durable shoes with an ergonomic design have uppers made of fabric and microfibers, are resistant to wear and tear and have Ekso Tech technology, which lends the shoe external fibers that act as the skeleton of the shoe and thus prevent the foot from twisting in the shoe without affecting the mobility of the shoe.

Outdoor shoes with a Vibram ® Gravity sole with Idrogrip ™ admixture in the rear part and Megagrip ™ in the middle part of the sole. The sole is therefore softer on the heel and toe, so it adheres to the surface more easily, for example when climbing. Low shoes for hiking have a universal use. The waterproof shoes have a Gore-Tex ® Extended Comfort membrane, so they are extremely breathable. Lace-up shoes have a reinforced toe and heel.

Product details:

- Low cut
- Asymmetric lacing
- Ergonomic design
- Ekso tech technology
- Vibram ® Gravity sole
- Climbing zones on the heel and tip of the sole
- Gore-Tex ® Extended Comfort membrane
- Waterproof
- Weight: approx. 2x 340 g
