Description

Tecnica men's shoes. The top men's trekking shoe is designed for enthusiastic, experienced hikers looking for the highest level of support, comfort and protection on challenging trails and hikes. Trekking shoes will reliably carry you over any type of terrain, whether on a one-day hike or on long routes. Forge hiking boots offer innovative technologies with exceptional comfort. Their appearance is modern, natural and elegant. The upper of the outdoor shoes for nature is made of high-quality 1.8 mm nubuck leather in cooperation with elastic textile material on the hem and instep, which enables a flexible and natural step and easy walking.

The nubuck leather on these men's outdoor shoes naturally conforms to the heat moldable insoles during the molding process. The Gore-Tex Extended Comfort membrane provides waterproofing without losing breathability, the Vibram sole guarantees excellent shock absorption and excellent traction and grip. The dimensioned protrusions on the sole are reversed to increase the contact of the rubber with the surface. The triple-density midsole protects the foot from hard stones, helps the protrusions on the sole to adapt to different terrains, and at the same time provides the foot with great support and comfort. The shoe insole is thermally adaptable and precisely tailored to the wearer's foot. The area of the heel, arch and ankle of the shoes are also thermally adjusted

for a perfect fit.
