Description

Tecnica women's shoes. Tailor-made trail sneakers for ladies! The special construction for women's feet allows for an excellent fit on the foot, precise adjustment, support and stability. The optimized trail shoe for women in the Origin LT model is adapted for runners with a lighter body structure. Female runners will be provided with a specific tailor-made fit for their naturally narrower heel - the shoe will not create pressure points or create unnecessary space for abrasions. Running shoes for ladies have a "sock" fit - they create the effect of a second skin on the foot, the upper is elastic and breathable, so they are perfect for dynamic trail training and races.

Cross-country running sneakers for ladies have a unique way of lacing - the laces are integrated into the upper, they create almost no unnecessary profile relief on the shoe, they offer precise micro-adjustment. The upper part of the shoes is moldable thanks to the TPU inner shell. This is how the shoes can provide a custom fit right out of the box. There are several layers on the sole, thanks to which your foot will be perfectly protected from sharp stones. This will be ensured by the EVA ESS layer. The TPU layer in the middle of the foot ensures the integrity of the sole, durability and stability. Outdoor trail running shoes are light blue with dark blue and white details. The insoles are heat-moldable to the size of the foot, and the area of the heel and arch of the shoes is also malleable.
