Description

Men's skates by Fila skates. The Breeze is a very versatile model with a stainless steel blade that will keep your feet warm during long hockey practices and after ice practice. The upper part of the men's skates has a denim finish, which prevents the penetration of moisture and offers a modern look. The waterproof synthetic insole perfectly surrounds the ankle and offers maximum lateral support.

Men's ice skates have an anatomically structured interior with lateral ankle support, which guarantees stability and confidence in movements. The advantage of Breeze ice skates is the 3M Thinsulate thermal insulation, which makes them ideal for very cold days. Lacing system with metal eyelet laces and Power Strap on the ankle allows for maximum customization. Men's skates have a pre-ground hockey-specific blade made of stainless steel. The knife is mounted on a strong, lightweight composite blade holder, giving you maximum maneuverability and control.

Ice skates are one of the best combinations of design and performance. Ideal for recreational skaters.
