**Available sizes**

**Reference number**

**Ean number**

**Quantity**

**Suggested retail price:** 1.49 € s DPH

### Description

Thermopad toe warmers. Activated carbon heaters consist of a mixture of natural substances: iron powder, salt, activated carbon, water and vermiculite. This mixture is surrounded by a soft membrane that allows oxygen to enter. In connection with oxygen, the iron powder is heated. The finger warmers are designed so that heat is generated immediately after opening the airtight package.

Disposable toe warmers are suitable for hunters and skiers, but also visitors to stadiums or Christmas markets will appreciate the pleasant warmth flooding the toes in their boots or ski boots in winter. Boot warmers are very light, comfortable and easy to use. Attach the adhesive part to the top of both socks so that the round edge of the heater is level with the tip of your foot. Then simply slip into your shoes and your toes will be protected from any cold for about 8 hours.
