Description

Thermopad hand warmers. Disposable hand warmers are made on the basis of activated carbon. Activated carbon heaters consist of a mixture of natural substances: iron powder, salt, activated carbon, water and vermiculite. This mixture is surrounded by a soft membrane that allows oxygen to enter. In connection with oxygen, the iron powder is heated.

The glove warmers are designed in such a way that heat is generated immediately after opening the airtight package. They can keep you warm for about 12 hours with natural heat. The hand warmer, often called a pocket warmer, can be placed in gloves, pockets, or just held in your hands. It is especially popular with stadium visitors, skiers, fishermen, hunters and all lovers of outdoor activities in winter. Disposable thermal gloves can be easily used even during a winter walk.
