Description

Defense spray for bears brand For. The so-called Bear Buster spray is a product based on Capsicum oleoresin and oxazepine and ensures high efficiency. It serves to protect nature visitors and is specially developed to repel an attack by a bear (or other larger animal). Unlike common universal defense sprays, it also contains the substance oxazepine, which ensures an immediate and higher effect, as well as a wider spectrum of damage to the animal's sensitive organs.

BearBuster bear spray has an effective range of 6-8 meters, depending on weather conditions, and creates an approximately 4m wide protective barrier to stop attacking animals. The used combination of substances ensures immediate extensive burning in the area of the respiratory tract, head and eyes with the effect of blurred vision. At the same time, it disables the beast's sense of smell for up to several days. This will make it impossible for her to stalk the victim. Bear spray is multi-purpose. When encountering a bear, a 1-2 second dose is required. Approximate yield: 150 ml - approx. 4 seconds.

Product details:

- Bear Buster bear defense spray
- also suitable for other predators
- based on Capsicum oleoresin and oxazepine
- high efficiency
- range of 6-8 meters
- creates an approximately 4 m wide protective barrier
