### Description

Men's jacket brand 4F. The ski jacket will delight you with its modern design and functional features. It has a DERMIZAX® membrane with a water column of 20,000 mm. It is intended for all professionals who need maximum protection during winter activities, especially if very good insulation against cold, wind and snow is required. The windbreaker for winter is made of extremely durable, highly functional material from the Japanese company Toray® and will provide you with protection against heavy rain or snow. The back of the windbreaker for men is lined with black silver mesh, which, together with the polyester filling, ensures sufficient thermal insulation and maintains an optimal ratio of warmth and weight.

The ski windbreaker has an adjustable and removable hood. Fastens with a high-quality YKK zipper, which is lined with an inner protective layer and finished with a chin guard. The men's jacket has taped seams. The advantage is the inner cuffs with thumb holes and the outer cuffs with adjustable velcro. The overall appearance of the winter jacket is complemented by an integrated snow belt with snaps. A bonus is the zipper ventilation holes in the armpits, which are used for thermoregulation. The men's ski jacket has a TeflonShield+ coating on the surface, which guarantees greater resistance to dirt. You will definitely appreciate and use the practical pockets - two inner and five outer. An interesting addition are the silicone projections on the shoulders, which make it easier to carry the skis.
