**Description**

Everett women's shoes. Women's hiking boots delight with their functional features. The upper part of the trekking shoes is made of softshell material, which ensures their low weight and their wind resistance. Thanks to the TexDryve membrane, the trekking shoes are waterproof and suitable even for adverse conditions. Their higher ankle cut will give your feet stability, which is also contributed by the Everett FixBase system. This prevents the ankle from spraining and the legs are stable even on uneven surfaces.

Women's hiking boots are tied with classic laces, which are supplemented with hooks in the upper part for better securing. The front part of the hiking boots has a reinforced tip with additional material. The padded collar of the shoe also contributes to the comfort when wearing hiking shoes. Footarch Support helps with proper footing. The rubber sole will provide you with good traction and at the same time good grip on uneven terrain. This Everett shoe is suitable for tackling hiking trails even in more demanding conditions.

**Product details:**

- ankle hiking boots
- durable softshell upper
