Description

Men's jacket by Northfinder brand. The men's ski jacket has a modern look in a two-tone combination and excellent functional properties. The ski jacket has a tight fit with fine stitching. The jacket for men has a warm filling made of 3D fibers like down, which will provide you with excellent thermal comfort. The hybrid construction combines two materials. The upper one is stronger and more durable, which protects the exposed parts. The lower, more pliable material ensures comfort when moving, which is also helped by the pre-formed sleeves with adjustable cuffs with velcro.

The men's ski windbreaker fastens with a YKK zipper lined with a windbreak. The men's jacket is sufficiently breathable, which allows you to be active without unnecessary sweating. The 10,000mm waterproof membrane allows you to play sports even in adverse windy conditions with rain. The water-repellent DWR treatment without PFC compounds ensures that raindrops do not soak in, but run off. If necessary, the men's waterproof jacket has vents on the sides that are used to regulate heat.

The windbreaker for winter has a practical hood with drawstrings and a high collar that will protect you from the cold and wind. The quilted jacket has multiple exterior zip pockets. Two main ones on the sides and another on the sleeve and chest. A practical mesh pocket is also inside. As a matter of course, the Northfinder jacket also has a practical snow belt with three snap fasteners. The winter windbreaker has taped seams. In this winter jacket, you are fully prepared for winter or skiing!

Product details:

- windbreaker for the winter for men
- trendy quilting
- two-color design
