Description

Kayland men's shoes. Trekking shoes Alpha will attract attention with their modern appearance and excellent functional properties. The Kayland Alpha model is a guarantee of performance and support during trekking. Men's hiking boots with asymmetric lacing, which perfectly surrounds the foot, thus ensuring the fixation of the foot. Mountain shoes are designed with an emphasis on foot ergonomics. The upper part of the hiking boots is made of durable suede. The sides are very finely perforated for a higher level of breathability.

The padded collar and tongue of the Kayland shoes ensure comfort when tackling hiking trails. A soft insole will also contribute to comfort. The toe and heel are reinforced and, thanks to the additional material, will provide better protection for the foot. The Gore-Tex® Extended Comfort membrane creates an effective barrier against rain and ensures excellent water resistance and dryness in the shoes. The midsole of trekking shoes will provide the necessary cushioning and shock absorption. The durable and grippy Vibram sole easily overcomes uneven and rocky terrain. Kayland hiking boots are the right choice for nature walks, trekking, hiking expeditions and outdoor adventures.
