### Description

Hoka One One women's shoes. Hoka running sneakers stand out with their trendy colorful design, which complements their excellent functionality. The Speedgoat model is among the brand's most popular models. It is also suitable for rough terrains and trails. With a new midsole that is extra light, this running shoe provides a more responsive ride. The advantage is even greater traction than before. The wider front part of trail sneakers ensures a more stable ride for runners and adapts to everyone. A bonus is the Vibram Megagrip rubber sole. It is suitable and exceptionally grippy in both wet and dry conditions. The Hoka trail shoes have a new updated upper made of dynamic mesh. It is a guarantee of comfort and excellent breathability.

Trail shoes have 3D printed overlays on the upper. They will provide additional support to the midfoot. Hoka running shoes have a reinforced tongue that has strategic cutouts for more breathability. Trail running shoes have lacing eyes containing a small wing-like component that ensures a secure fit. The sole of the branded sneakers has 5 mm "stepped" protrusions. They offer additional support and stability in one.
