Description

Adidas men's shoes. Hiking boots are light and durable. A higher ankle cut will provide the necessary support and stability when tackling hiking trails. They are also made from recycled materials. The adidas Eastrail model fits perfectly on the foot. It has a close-fitting and strengthening construction with comfortable cushioning. Mountain shoes have the RAIN.RDY treatment, which blocks rain and keeps you dry.

Men's trekking shoes have laces, which are supplemented with metal eyelets at the top. Thanks to the midsole made of light EVA material and the Traxion sole, they provide comfort and traction, which is necessary on uneven terrain. The upper part of the men's hiking shoes is made of a durable material that is also breathable and provides the necessary air circulation. Black forest boots are a suitable companion on outdoor adventures.
